builders and successors. Currently, China is transitioning from the high-speed development stage to the high-quality development stage, and high-quality talent training is the inevitable choice of the new era and the inevitable need for the rapid development of the social economy.

1.THE VALUE LOGIC OF COLLEGE LABOR EDUCATION IN THE NEW ERA

Since ancient times, at home and abroad have attached great importance to labor education. In the new era, labor education refers to the labor education that is rooted in the soil of China under the guidance of Marxist theory, has profound cultural deposits, is full of Chinese characteristics, and meets the needs of the development of the labor situation in the new era^[1]. Marx believed that labor is the most basic practical activity to meet their own material and spiritual needs, as well as the most basic functional training of the people. The realization of the liberation of all humankind also needs to rely on labor.

Labor plays a vital role in the development of both individuals and nations. The theoretical basis of labor education in colleges and universities in the new era is precisely derived from the description of labor in Marx's theory. With the development of The Times, the theory and situation of labor education are constantly improving, and it has injected new energy into Marxist labor view. As an excellent traditional culture of the Chinese nation, diligence has been continuously inherited and carried forward. From the ancients of "Bao Jianfeng from hone out, plum blossom incense from the bitter cold" to the legend of the Yugong, Jingwei reclamation, and other stories. To the spirit of the Long March, the spirit of the Red ship, and the spirit of hard work and entrepreneurship formed by the modern Communist Party of China in the revolution. They all demonstrate the people's outstanding qualities of hard work, perseverance, and perseverance. The model worker and craftsman spirit carried forward in the new era are the traditional virtues of diligent and persistent people. Insisting on labor education in the new era reflects people's inheritance and development of traditional culture and combines traditional culture with modern labor education so that labor education courses have strong vitality in the new era.

Carrying out labor education help college students to establish a correct world outlook, outlook on life, and values. Also, the physical exercise can improve students' ability to solve problems, deepen their understanding of the nature of things, but also help to train college students innovative thinking. In society, some do not cherish the fruits of labor, do not want to work, or even will not work. As an important carrier of labor education, colleges and universities should pay more attention to labor education. They should take effective measures to strengthen the labor education of young people. We will actively cultivate and practice core socialist values. The combination of morality, wisdom, physical beauty and close contact with reality form a set of effective labor education systems to realize the unity of knowledge and practice.

2. THE PRACTICAL BASIS FOR CARRYING OUT COLLEGE LABOR EDUCATION IN THE NEW ERA

Colleges and universities are the main positions to cultivate talents. Developing and strengthening labor education for college students is related to the personal growth and overall development of college students and to the quality of the builders of socialism with Chinese characteristics. It is significant to cultivating an excellent traditional culture for college students.

In the new era, labor education presents many new characteristics. With the development of the Internet, the labor concept has a diversified development trend. College students should actively adapt to the outcome of the labor situation and cultivate their labor skills and consciousness. As the main way to train college students, colleges and universities should fundamentally strengthen the training of college students' labor education. And the college student who only participates in labor can truly realize that patriotism, dedication, integrity, friendliness, and so on good quality is closely related to the individual's future and can form the correct labor concept.

Due to the influence of the environment, the lack of family labor education and the dilution of labor education in schools have resulted in some college students who do not respect the fruits of others' labor, weak labor consciousness and labor concept weakening. In the case of material affluence, college students ignore the fundamental significance of labor. As the carrier of labor education, colleges and universities play a vital role in cultivating college students to establish correct labor concepts and enhance the all-round development of morality, intelligence, body, beauty and labor.

3.THE PRACTICAL PATH OF COLLEGE LABOR EDUCATION IN THE NEW ERA

Labor and education complement each other. Under the background of the new era, colleges and universities should carry out more courses related to labor education, organically combine labor thought, labor skills cultivation, and labor practice training, and form a college labor education system.

Strengthen ideological and political education in colleges and universities is to cultivate college students' ideological and political quality and moral level of the main positions, ideological and political education is closely related to labor education and developing college students advocating ideas about labor, respect for labor, for the consciousness of respect for labor, scientific labor, and lawful labor, motivate students hard work the courage to pursue the courage and perseverance.

Strengthen practical skills training. In practice, college students continue to learn and master labor skills to truly practice a strong ability, strive to the top in the fierce competition, and become aspiring youth to serve the motherland. Practice education is an essential part of labor education but cannot wholly replace labor education; the school volunteer service activities, education practice, and production field activities can, to a certain extent, help students achieve the purpose of labor. In reality, some colleges and universities also have outdated practical education content, without expansion and innovation, so that students cannot understand the meaning of labor in the process of

labor. College students establish the concept of loving and respecting labor, do true study in practice, and feel the charm of labor to fall in love with labor.

Colleges and universities can seek practical resources with local characteristics and actively expand innovative practice bases outside the campus. Colleges and universities should establish more innovative practice platforms for labor skills, improve labor reward and incentive mechanisms, and set up diversified practice scenarios. College students can apply what they have learned to practice, cultivate their courage and perseverance to innovate, and become valuable people in society.
